Drip Irrigation Review:
Seven Years of Consistent
Crop Yield Increases**

Crop yield and soil health continue to be major agricultural concerns as regional drought and rationed water delivery continue. Most growers know that plant roots need air to breathe. Without it, soil can become anaerobic, inhibiting plant growth and yield. The solution, Mazzei AirJection® Irrigation technology.

Testing at Stamoules Produce Company

Seven years of operational data using Mazzei AirJection® Irrigation technology has been collected at Stamoules Farms. The improvement in water use efficiency, fertilizer inputs and the addition of air (21% oxygen) at correct levels to the root zone to support plant and soil conditions, resulted in field yield increases of up to 22% for cantaloupes, honeydew melons, corn and peppers.

Data Collected during the 7-year Stamoules Produce Company Study:

Stamoules Produce Company installed 1,500 acres of cantaloupe, honeydew melons, corn and peppers using AirJection. Approximately 8,650 (A24) injectors were individually installed on two subsurface drip irrigation lines per planting row.

| Crop | Total AirJection® Acreage | Total of AirJection® Field Boxes | "Total Boxes" for equivalent AirJection® Acreage* | Average per acre increase in boxes | Total Box Increase over Farm Average |
|--------------|---------------------------|----------------------------------|---|------------------------------------|--------------------------------------|
| Cantaloupes | 6,181 | 6,525,368 | 5,287,284 | 202 | 1,247,407 |
| Corn | 2,521 | 1,111,721 | 1,086,528 | 10 | 23,943 |
| Honeydews | 1,320 | 2,063,656 | 1,855,783 | 134 | 176,305 |
| Bell Peppers | 460 | 936,365 | 768,581 | 371 | 170,290 |

Benefits of AirJection

► Significant Increases In:

- Root Mass
- Crop Yield
- Fruit Density
- Sugar Content
- Germination Rate

► Improves Water Use Efficiency

- Early Maturation
- Increases Plant's Salinity Tolerance
- Improves Late Season Production
