WASTE-WATER DISPERSAL SYSTEM

NETAFIM, THE WORLD LEADERS IN DRIP IRRIGATION, HAVE DEVELOPED A NEW SAFE AND EFFICIENT SYSTEM TO UTILISE YOUR WASTE-WATER...

THE E-FLOW SYSTEM:

Netafim, a world leader in drip irrigation, has manufactured for Tradelink a waste water dispersal package utilising effluent water from on site treatment systems. The Eflow waste water dispersal system is a grid of in-line drippers evenly dispersing effluent water in either garden or turfed areas.

Advantages of E-Flow System are:

- Environmentally friendly system, reducing offensive odours, aerosols drift and buffer zones.
- Uniform distribution due to the unique pressure compensating non leakage dripper.
- Low application rates allowing dispersal areas to remain unsaturated reducing run-off and ponding.
- Minimal operator dependency.
- Unique serviceable filter, safe guarding the life of the system from root intrusion.
- Reducing the risk of public liability.

Manufactured for :

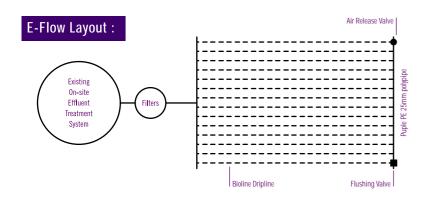

The Netafim dripline, with it's technologically advanced internal dripper, should be laid out under mulch or underground.

E-FLOW FEATURES:

- Mechanical root intrusion barrier
- Continuous self-flushing mechanism
- Non-Leakage (CNL) mechanism
- Reduces drainage and refill effect
- · Ideal for subsurface application
- Anti-suckback mechanism
- · Unique clog resistant dripline
- Purple colour identifies Eflow as a waster water product
- Maintains uniform flow rate over pressure range of 10m-35m

Bioline Specifications:

Wall Thickness	1.0 mm
Flow Rate	1.6 l/h
Dripper Spacing	0.4 m
Pressure	10 - 35 m
Diameter: i.d / o.d	14.4 / 17 mm

E-FLOW KITS:

Start Up Kit includes:

Bioline Dripline x 200m 25mm Purple LDPE x 50m 25mm Arkal Disc Filter 25mm Techfilter Air Release Valve Flush Valve All Connections

Area of distribution: 200m² @ 1m lateral spacing

E-Flow is available as convenient kits to cover all your irrigation needs

Add-on Kits are also available to increase the area of distribution

Netafim can provide technical support for users of waste-water dispersal systems, particularly in the areas of filtration, design and system management.
