

Low Density Polyethylene (LDPE) Tubing

By Netafim

Introduction

Netafim is the largest Drip Irrigation manufacturer in the World with factories based in many countries on every continent. In Australia we are ISO 9001 compliant in a general sense and ISO 9261 specifically for drippers, dripperlines and tubing.

Every coil of dripperline that we manufacture has to meet a wide range of International standards e.g. a coil locally made in Australia is suitable for the USA market, and vice versa.

LDPE tubing

1. Netafim manufactures a wide range of diameters of tubing around the world to suit local standards and as such in Australia and New Zealand we offer the 13mm, 16mm, 19mm, 25mm and 32mm options known as Type 30.
2. All of our coils have a stick on label as well as being imprinted thermally or with ink to display relevant information such as
 - Wall Thickness
 - Internal Diameter
 - Pipe Type
 - Date Time stamp of manufacture
 - Bar Code (Production & Commercial)
 - ISO 9261 compliance
 - Order Number/Coil Number

An example of a stick on label can be seen below

3. ISO 9261 is adhered to by very, very few manufacturers. Netafim is one of the few. This ensures a high level of Quality Control to ensure customer satisfaction. There are strict tolerances relating to Wall Thickness, Tube diameter, emitter flows etc. See above
4. Ink printing typical for 13mm LDPE can be seen below

5. Where relevant we incorporate a percentage of high quality re-cycled material into our LDPE products
